Greater Akron Chamber · Card Scanner · for the people who scan and check cards

> This short guide is all you need to scan and review cards. Admin jobs (accounts, settings, the MC Trade import) are in the **Admin & MC Trade Guide**. All pictures use made-up demo cards.

Contents

- 1. What the scanner does
- 2. Signing in
- 3. Scanning cards
- 4. The review queue
- 5. Checking a card
- 6. AI suggestions (optional)
- 7. Duplicates
- 8. Approving many cards at once
- 9. Undo and changing your mind
- When to ask an admin

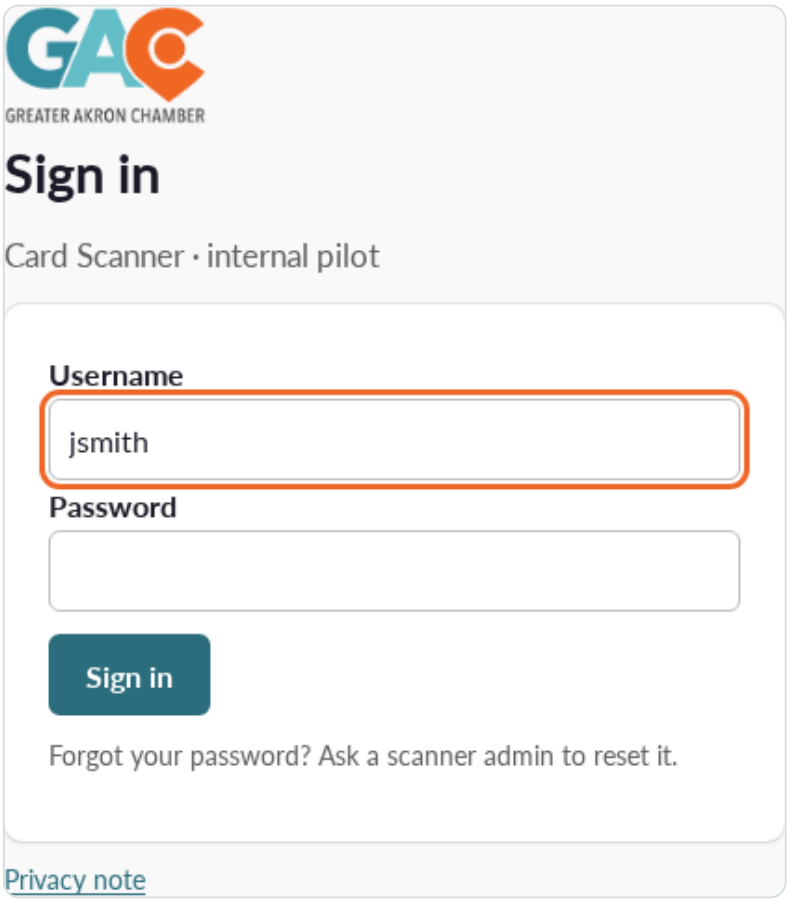

1. What the scanner does

You take photos of business cards from an event. The scanner reads each card and fills in the name, company, email, phones and address. **You check every card against its photo**, fix anything wrong, and approve it. Approved cards are then exported to a file that goes into MC Trade.

Everything stays on the office computer. Nothing is sent to the internet.

2. Signing in

1. Open the scanner (the **GAC Card Scanner** app, or **http://localhost:8765** in a browser).
2. Type **your own** username and password, then click **Sign in**.

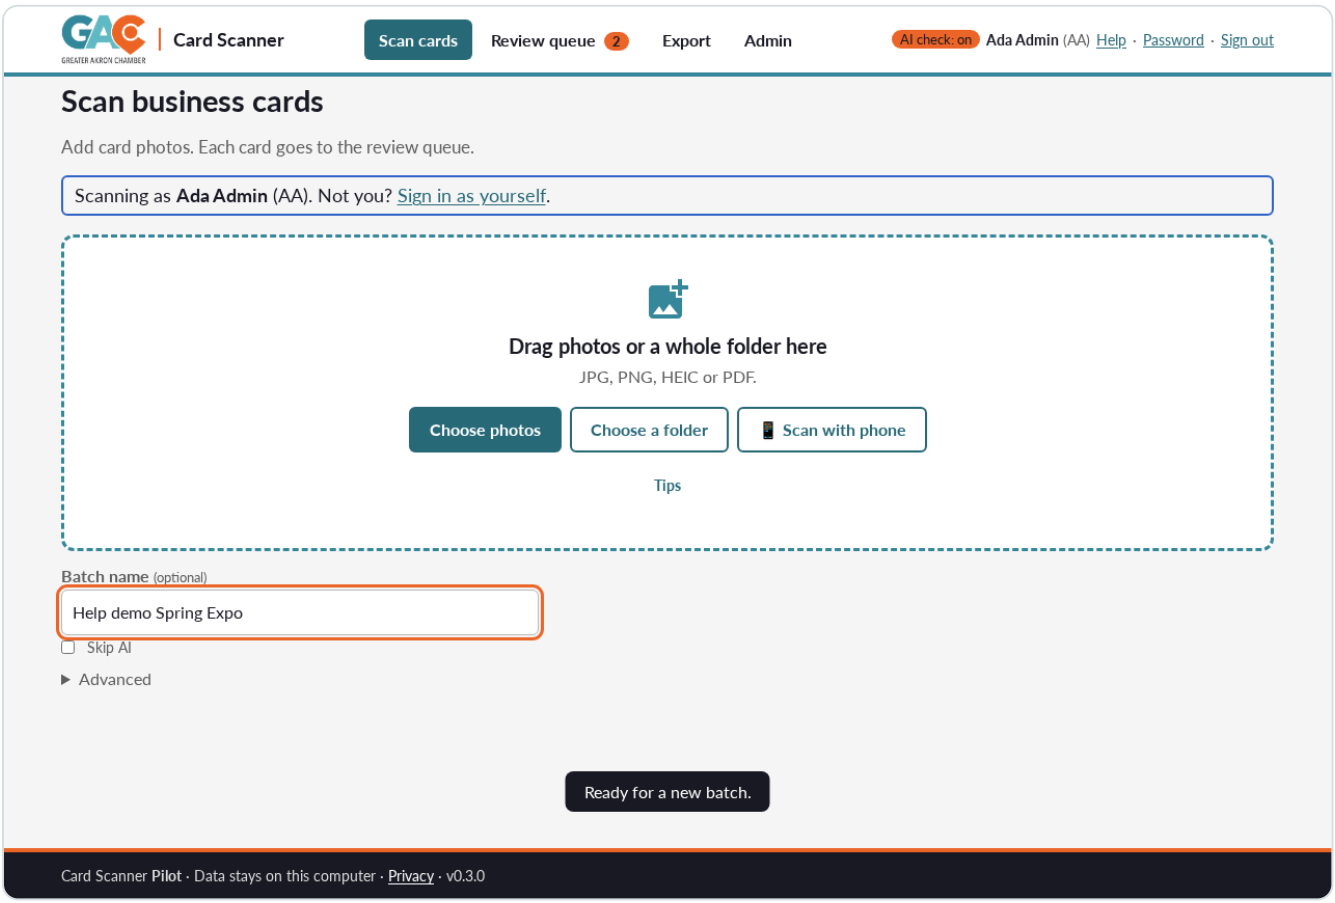

The sign-in page.

- The first time, you choose your own password (at least 10 characters).
- **Always use your own account.** Your initials are saved on every card you touch.
- On a shared computer, click **Sign out** when you leave.

- Forgot your password, or locked out after 5 wrong tries? Ask an admin.

3. Scanning cards

1. Click **Scan cards**.
2. Type a **batch name** after the event, for example *Oct 15 Business After Hours*.
3. Drag the photos onto the dashed box, or click **Choose photos** or **Choose a folder**.

The Scan cards page.

Good photos: one card per photo, flat on a dark table, filling the picture, no glare.

Each card takes a few seconds. **You can start checking cards while the rest are still being read.** In the Review queue, a batch that is still being read shows as **"Spring Expo (5, being read…)"**.

Each finished card gets a tag:

Tag	What it means
Looks good	Nothing special. You still check it.
Needs a look	Something needs a second look.

Tag	What it means
Not added	The file was skipped. The reason is shown (not a photo, too small, or already scanned).

PDFs and iPhone photos. You can add HEIC photos (iPhone) and PDFs. A PDF is read one page at a time: the list shows *Reading PDF: page 2 of 5…*, and each card appears as its page is read. A scanner sheet with several cards on one page becomes one card per card. Up to 200 pages and 400 cards per file.

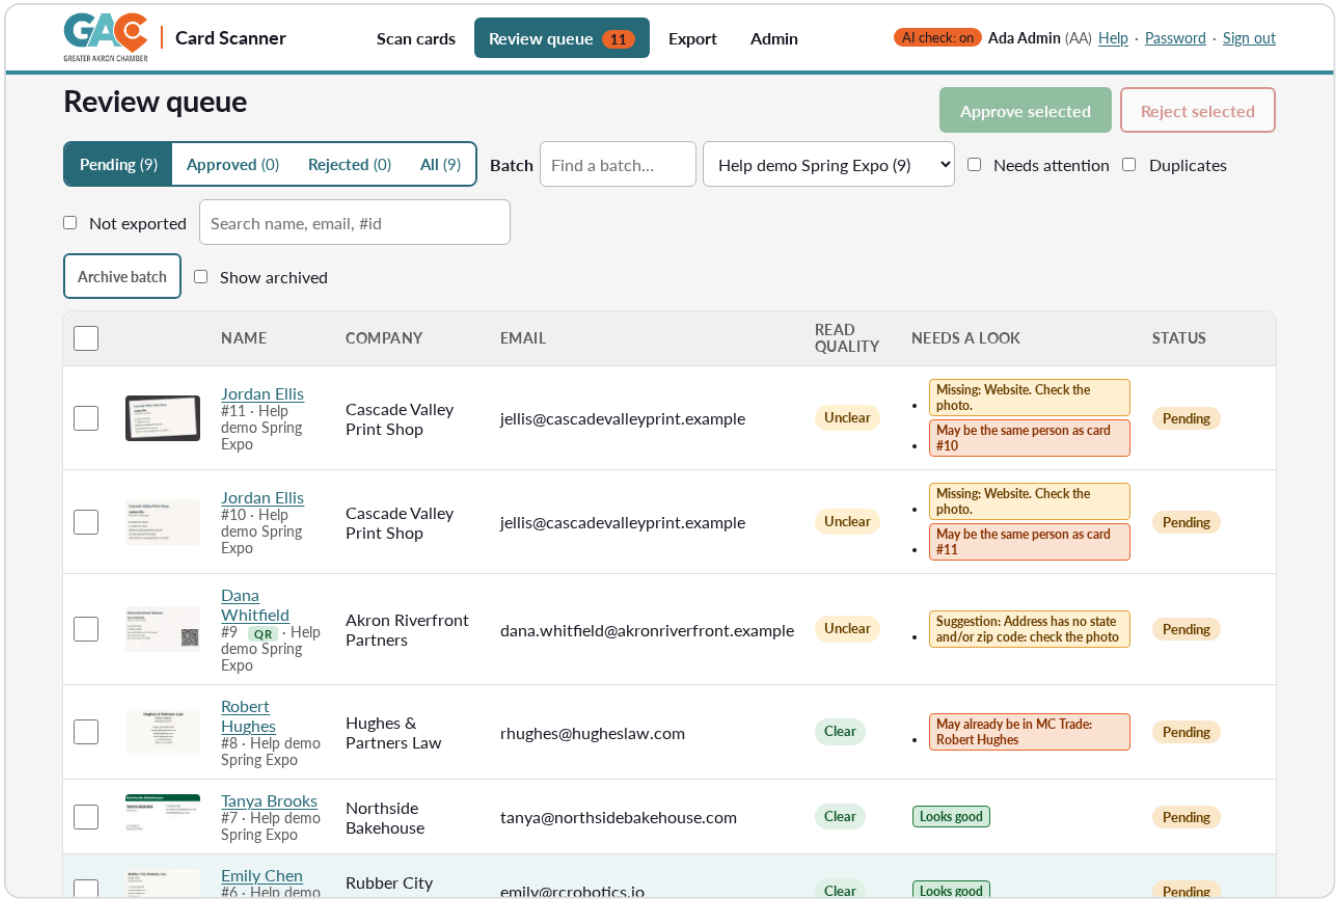

Cancel. Cancel stops the cards that are still waiting (and the rest of a PDF). Cards already added stay, and no card is added after you press Cancel. The list then says *Stopped. N kept, M not scanned* (N = cards from this upload), and the stop is noted in the audit log.

Skip AI. Tick **Skip AI** before adding photos when the AI line is long (a busy event). Those cards are not sent to the AI double-check; you can still ask for it on a card later.

"Reconnecting… your cards are safe." The scanner restarted or the connection dropped. Wait: it reconnects and sends waiting photos by itself.

4. The review queue

Click **Review queue**. It opens on your newest batch; **More batches…** in the drop-down shows the others. You see the **Pending** cards first. A red **Blocked** chip means the card has something to fix before it can be approved.

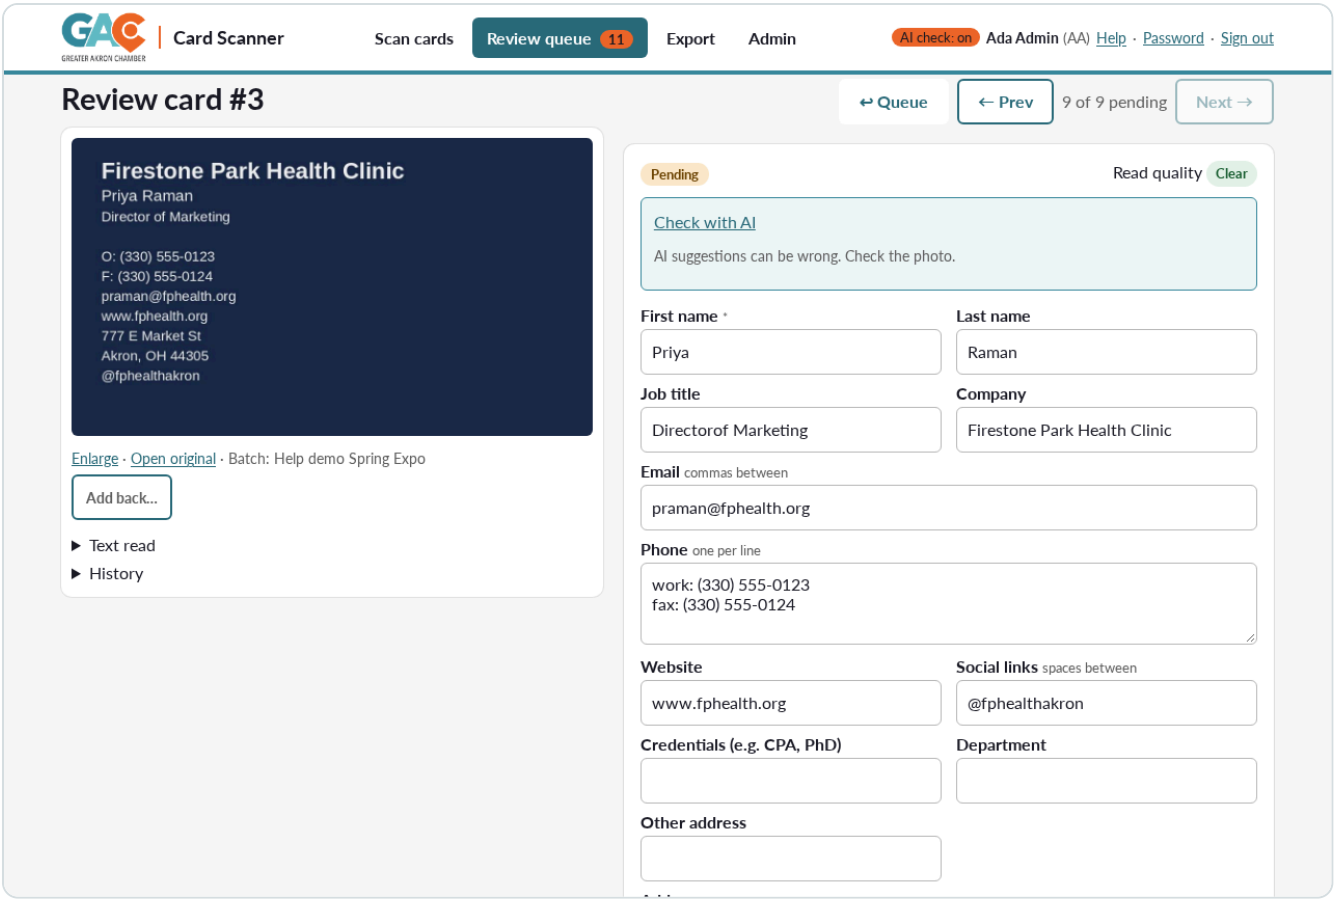

The queue for one batch.

- Tick **Needs attention only** to see just the cards with a problem. The reason is in plain words.
- Click a name to open the card.

5. Checking a card

The photo is on the left. The details are on the right.

The review screen.

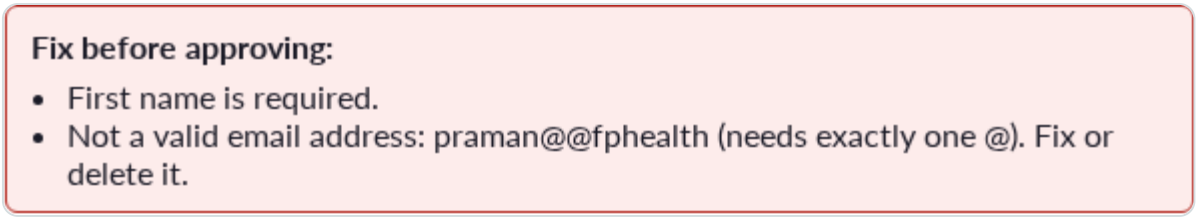

1. **Wait until the fields are white.** Grey fields mean the card is still loading.
2. **Compare every field with the photo.** Click the photo to zoom.
3. **Fix anything wrong** by typing in the field. Yellow fields were hard to read, so look closely.
4. Click **Approve** (or press **A**) when it's right. Click **Reject** (or press **R**) if it isn't a real contact.

Good to know:

- The counter at the top says how many cards are left, for example **"2 of 7 pending"**. When you finish the last one it says **"0 pending left"**.
- **Saving…** on a button means: wait a moment. Clicking twice does nothing extra.
- Keys (when you are not typing in a field; press **Esc** first): **A** approve · **R** reject · **J** next · **K** previous · **U** undo.

When Approve says no

A red box **Fix before approving** lists **every** problem as soon as the card opens, and the fields turn red. Fix them, Save, and click Approve again.

A missing first name and a broken email.

Always needed: a first name (no digits in names), a full email, and phones with an area code (e.g. 330-555-0100). For softer warnings Approve asks for a short reason.

The card really says that? ("Confirm")

Some blocks are about values that *look* misread (a garbled company, a job title like "Acc0unt"). If the photo shows exactly that, Save, then click **Confirm <field>** in the red box: one field at a time, and type why (e.g. "printed like this on the card"). The card history and the audit log show who confirmed which value and why, and the field gets a ✓ **confirmed** tag. Phone numbers can never be confirmed: fix them. Email, website and address can only be confirmed by an admin: the box says **Ask an admin to confirm it**. If you edit the value later, or merge cards, the confirmation no longer counts.

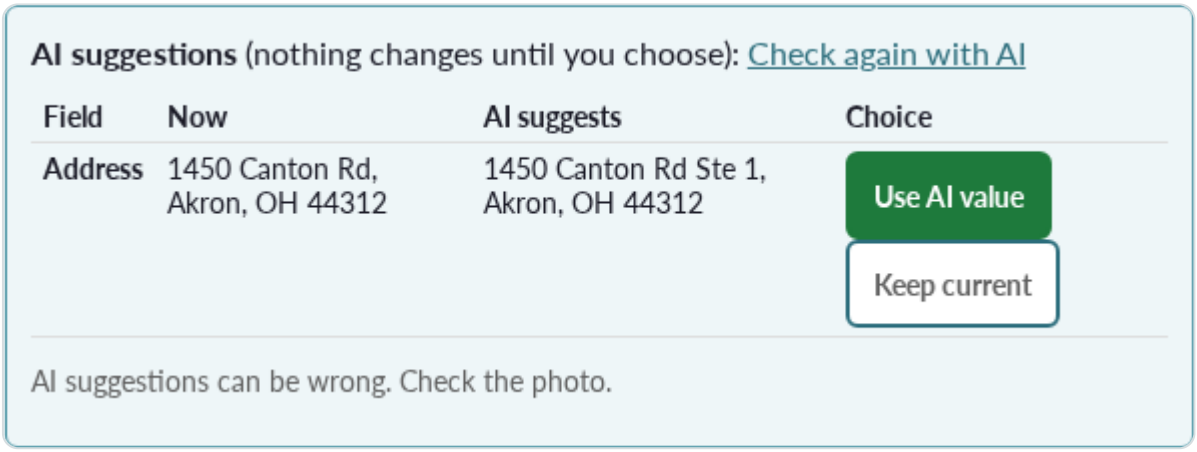

"Nothing was saved"

If you see **"Card #N changed since you opened it… Nothing was saved"**, someone else (or the AI) changed the card at the same time. Your typing stays on the screen. **Reload the card, check it, and save again.** Nothing is ever half-saved.

---

6. AI suggestions (optional)

The top bar shows **AI check: on** or **AI check: off**. When it is on, a small AI on this computer re-reads hard cards and may **suggest** a fix. It never changes a card by itself.

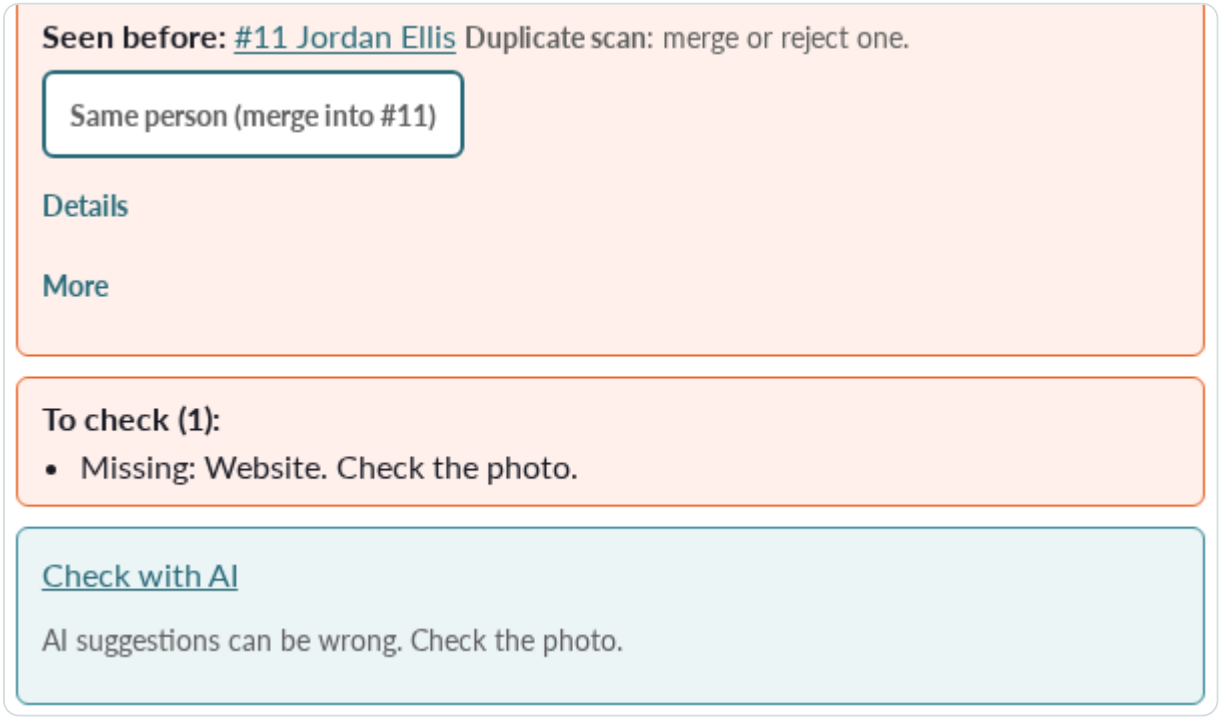

An AI suggestion. (This demo AI always adds "Ste 1".)

For each row choose **Use AI value** or **Keep current**, then check it against the photo. You don't have to wait for the AI: you can approve now.

7. Duplicates

The scanner warns you in an **orange box** when a card may be a duplicate.

Same person twice in this batch (same email or phone): you must deal with it before approving. Click **Same person (merge into #X)** to add any new details to #X and drop this card, or reject one of the two cards. (**Details** lists every look-alike.)

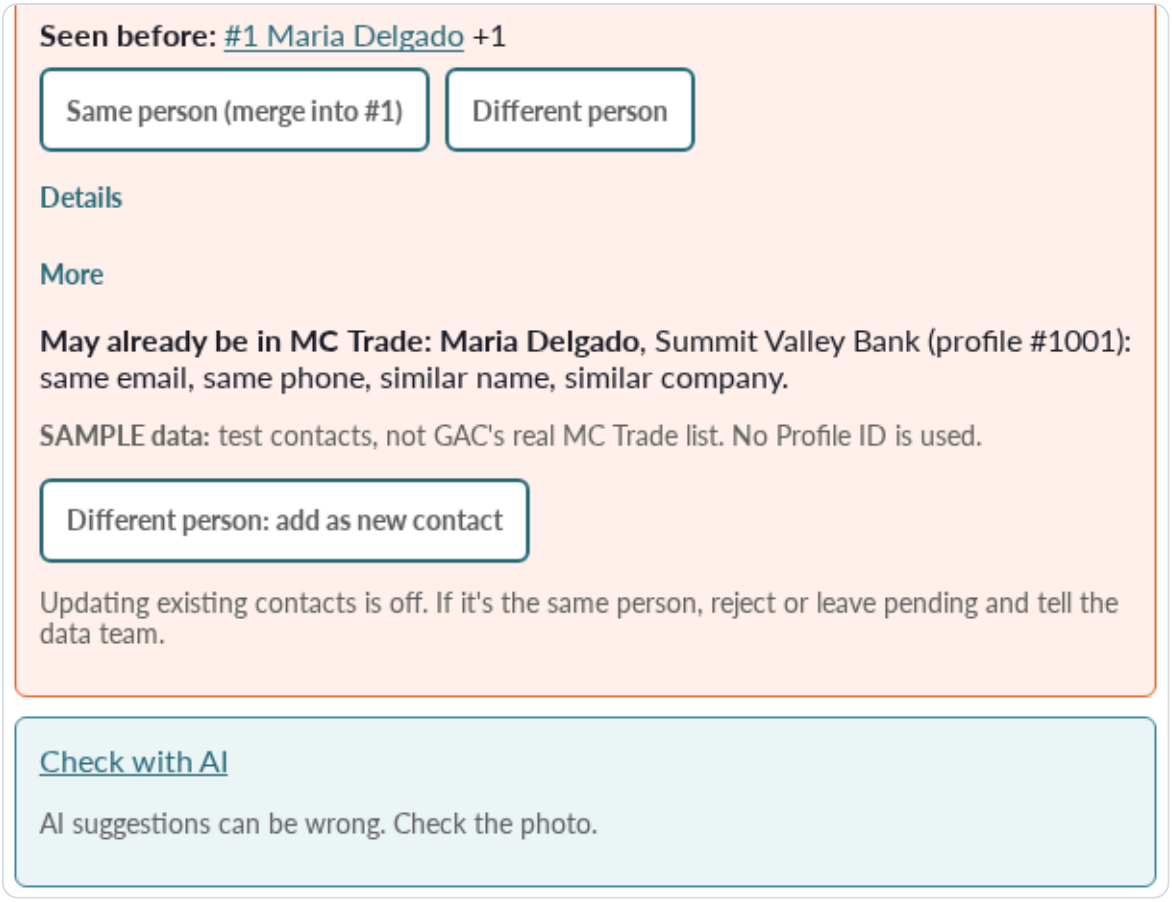

Two photos of the same card in one batch.

After one of the pair is rejected, the other card shows **"May be the same person as card #N (rejected, this batch)"**. That's only a hint. Check that the right card was kept, then approve.

Look-alike in another batch (someone you met at two events): this only warns. Choose *Same person…* to merge, or **Different person … keep both** if you are sure they are different people.

May already be in MC Trade: choose **Different person: add as new contact**, or reject the card if it's the same person and tell an admin.

A person seen in other batches who may already be in MC Trade.

If Approve says **"This person was exported before"**, that person was already sent to MC Trade from another batch. Open that card to compare, or **Approve it anyway** if you're sure. You are asked this even while the AI is still checking the card. After **Different person** you are not asked about MC Trade again.

---

8. Approving many cards at once

In the queue, tick the cards (or the top box for all) and click **Approve selected**. Cards that still need fixing are **skipped**, and the box tells you why.

---

9. Undo and changing your mind

- A message at the top confirms each action, with an **Undo** link.
- ↶ **Undo** in the top bar (or **U**) reverses your last action. It works for your own actions from the last 24 hours.
- On an approved or rejected card, **Move back to pending** reopens it.

When to ask an admin

Ask a scanner admin when:

- you can't sign in, or you forgot your password
- the red box says **Ask an admin to confirm it** (an email, website or address the card really prints that way)
- you see **"Photo deleted"** and need the photo
- a card is **archived** and can't be changed
- the scanner says **"can't connect"** (the scanner window was closed)
- you think someone is **already in MC Trade**
- the **Export** page says *blocked* or *refused*, or you are asked to export
- someone asks to be **removed** from our records
- anything looks wrong: take a screenshot, note the card number (#), and tell the admin.

More detail: the Admin & MC Trade Guide and the one-page cheat sheet.
