GREATER AKRON CHAMBER

Reviewer Start Here

Plain-language steps for scanning and checking cards: sign in, scan, review, duplicates, approve, undo and export.

Pilot guide · updated Oct 28, 2026 · version 0.4.8

Greater Akron Chamber · business-card scanner pilot · internal use only

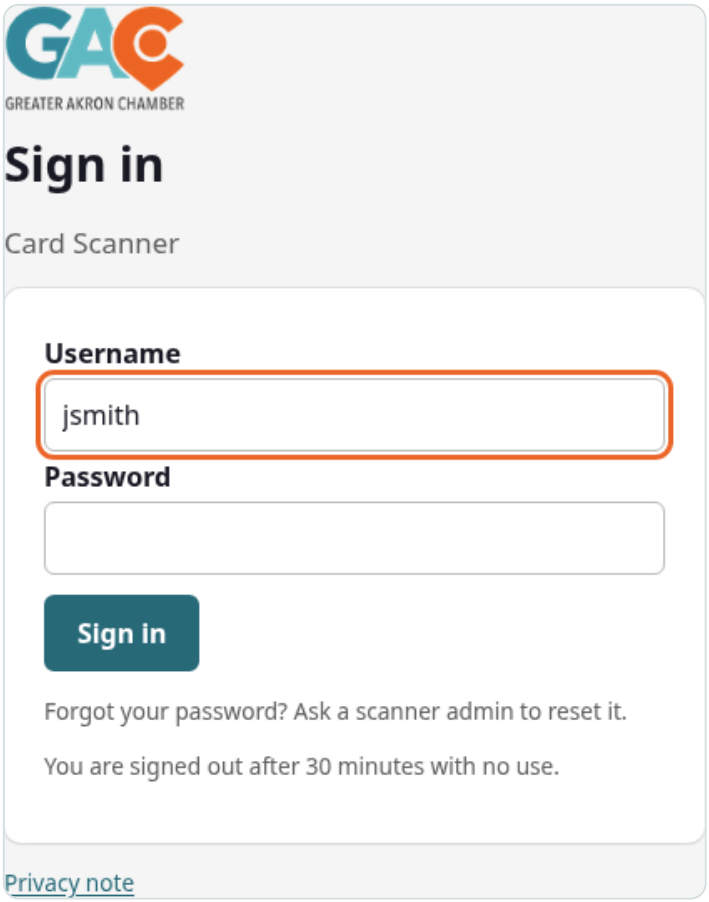

Scan, check, approve, export. Admin jobs are in the **Admin Guide**. Pictures use made-up cards.

Contents

- 1. Sign in
- 2. Scan
- 3. Review one card
- 4. Same person?
- 5. Export
- 6. Ask an admin

1. Sign in

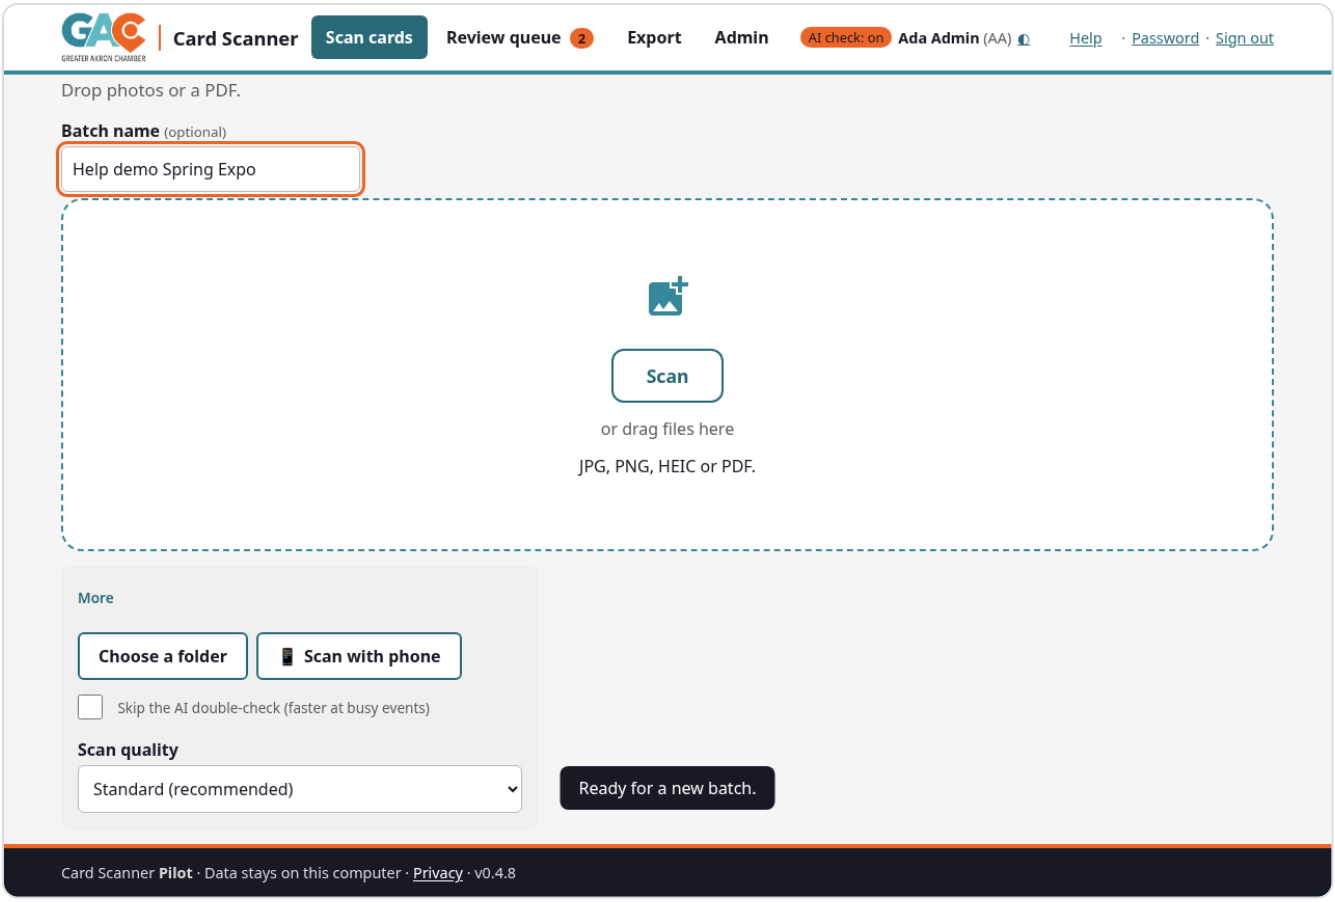

Open **GAC Card Scanner**. Use **your own** username and password.

- The top of every page says **You are: your name**. Not you? Click **Not you?**. It signs you out.
- After 30 minutes with no clicks you are signed out (not while photos upload). The sign-in page then says so.
- Locked out? Ask an admin.

2. Scan

1. Click **Scan cards**.
2. Type a **batch name** (e.g. *After Hours*). The date and your initials are added.
3. Drop the photos on the box, or click **Scan**.

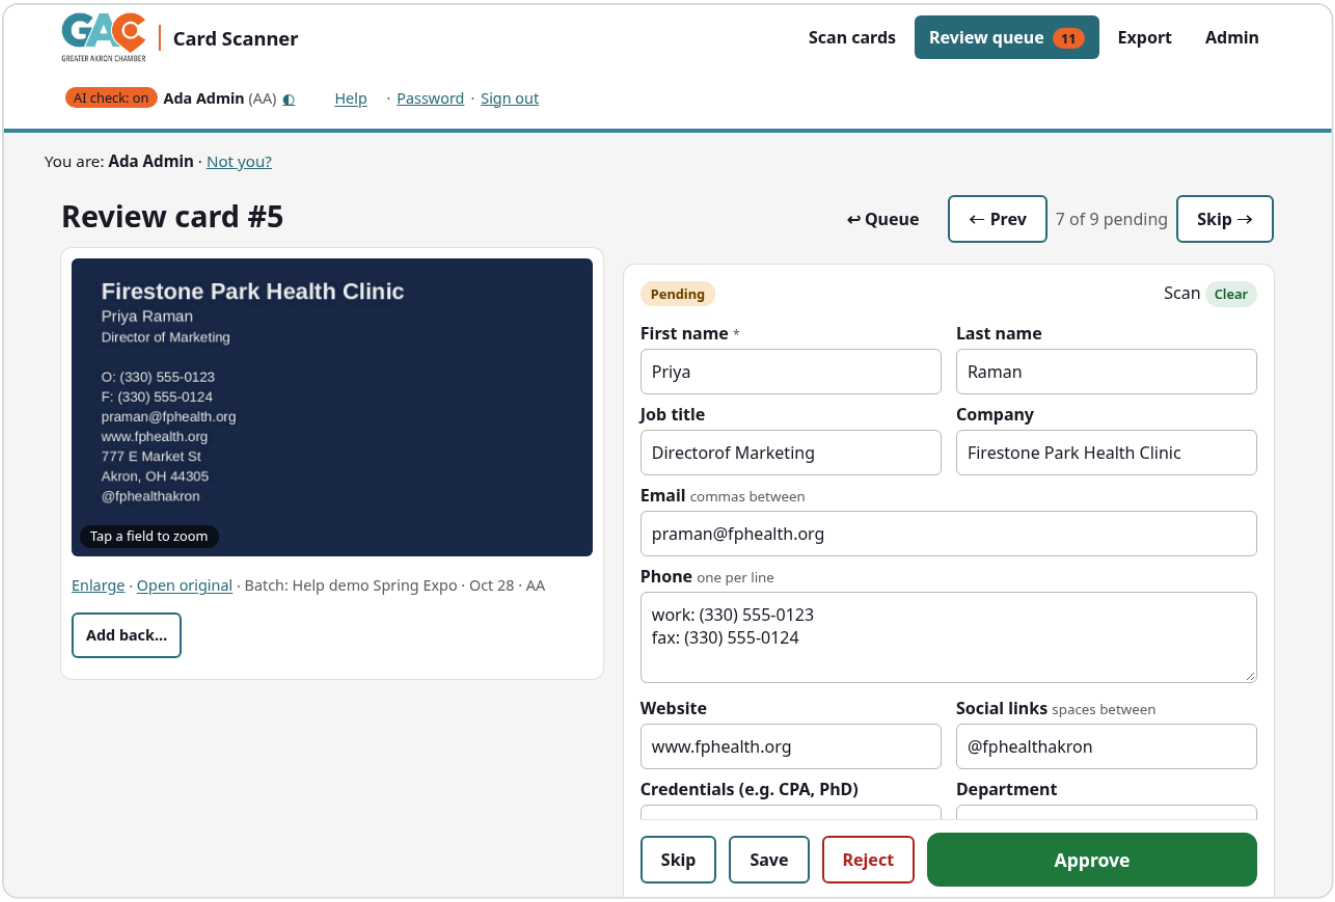

One card per photo, flat, no glare. You can review while the rest are read.

On the Scan page: **Needs a look** = check the photo · **Blocked** = fix before approving · **Not added** = skipped · **Cancelled** = stopped.

---

3. Review one card

Click **Review batch →**. Check each field against the photo.

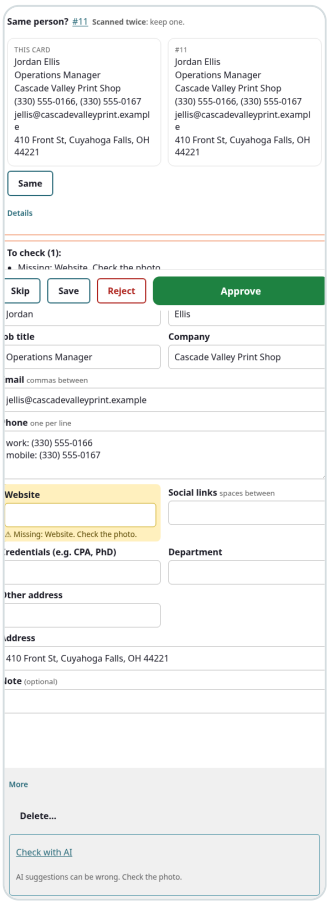

Do this	How
See where a field was read	Tap the field. **Esc** = whole photo.
Fix a field	Type, then **Save**.
Approve	**Approve**, or **Enter** (not while typing in a field).
Reject	**Reject**, or **R**. It asks first.
Next / previous card	**Skip**, **J** / **K**, or the arrow keys.
Undo	**Undo** on the message after Approve, **Ctrl+Z**, or **U**. It undoes your last change in the current batch only, for up to 2 hours. The button shows what it will undo and the batch.

- **Yellow** = check the photo.
- **changed** = the scanner tidied it. Hover to see what it read.
- **Blocked** = fix before approving.
- **Red box**: fix the field. If the card really shows it like that, an admin must confirm it: a misread in name, title, company or department, or a block on email, website or address. Click **Needs admin** to flag the card.

4. Same person?

If a card looks like another one, you see both side by side.

- **Same**: one card is kept. New details are added to it.
- **Different**: both are kept.

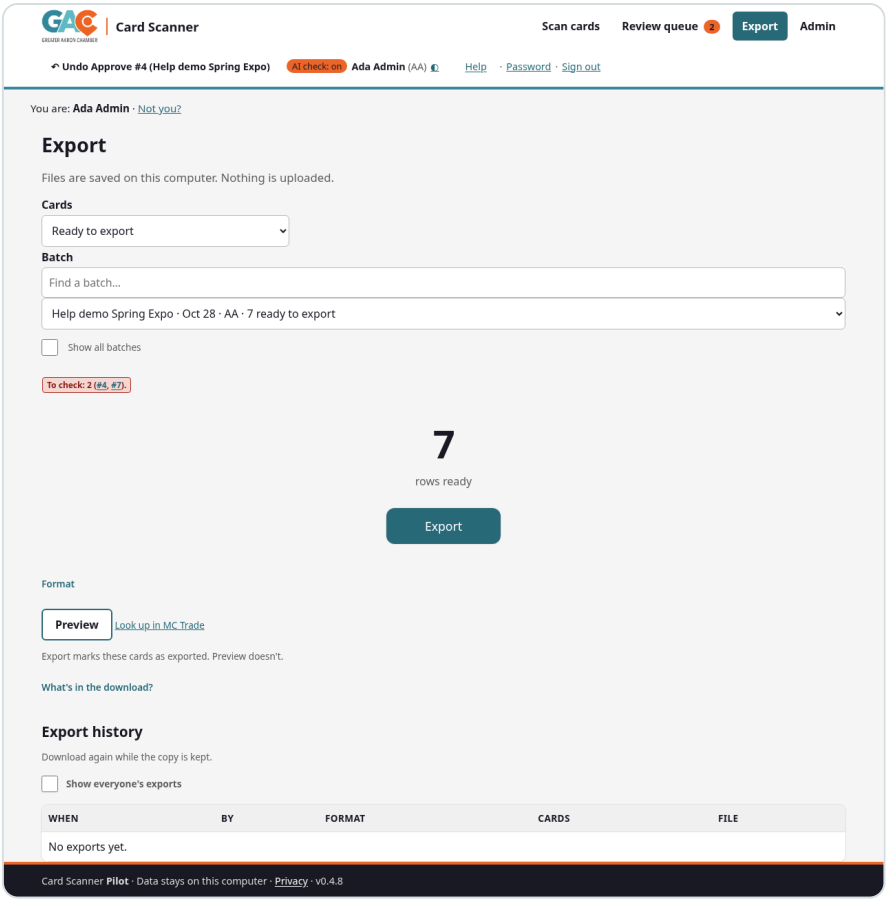

Answer this first. **Enter** won't approve until you do. A card in someone else's batch shows only as a count ("Looks like 1 card in another batch"): click **Different** if it's not the same person, or ask an admin. If the same person was exported before, or may be in MC Trade, **Approve** asks once more and names the earlier export.

If you edit a card that was already exported, the message says the edit won't be exported again unless an admin includes it.

---

5. Export

1. Click **Export**. Your current batch is chosen.
2. Click **Preview** to check the rows.
3. Click **Export**, then **Save**.

- **To check** = cards to look at before the import. The READ-ME lists them.
- Import only the file named **IMPORT-ME_...xlsx**. Files named **NOT-FOR-IMPORT_...** are for reading.
- You can export **only your own batch**. Other batches: ask an admin.
- Export marks the cards as exported. **Preview** doesn't.
- **Export blocked:** open the listed cards and fix them, or click **Needs admin**.
- The READ-ME starts with one line, for example **Ready to import: 3 rows (2 clean, 1 to check). Not in the file: 1 edited after export.** Test 2 rows first.
- **Nothing new to import:** no file is made. The page says why (for example, the card was edited after export).
- **Edited after export:** a card you change after it was exported is not in the next file. Only an admin can put it in again.
- **N waiting for admin:** cards you sent with **Needs admin**. They are not in the file until an admin checks them.

---

6. Ask an admin

Your admin: ask the front desk.

Ask an admin when:

- you are locked out;
- a red box says **An admin needs to confirm this.**
- you need to export someone else's batch.
