GREATER AKRON CHAMBER

# Admin & MC Trade Guide

Installing and running the scanner, AI double-check, duplicates and exports, the MC Trade import, accounts, settings, privacy, troubleshooting.

**Pilot guide · updated Nov 12, 2026 · version 0.4.15**

Greater Akron Chamber · business-card scanner pilot · internal use only

For the person who runs the scanner and does the MC Trade import. Reviewing cards: **Reviewer Start Here**. **Demo video**.

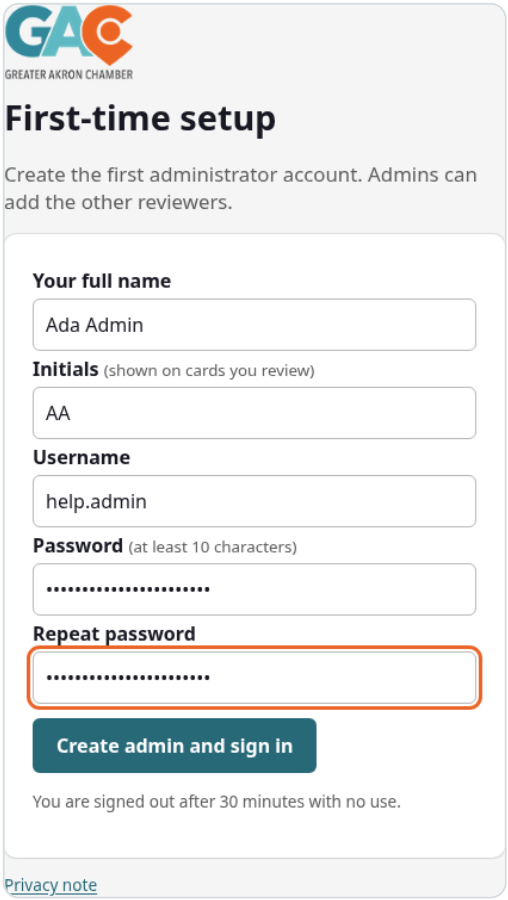

**Not yet checked against MC Trade.** The import file has not been tested with MC Trade's real import template. Import **2 rows first** and check them in MC Trade before importing the rest.

## Contents

- 1. Install (once)
- 2. Every day
- 3. Who may do what
- 4. Export
- 5. MC Trade import: first time
- 6. Settings and accounts
- 7. Archive, audit, removal
- 8. Problems

## 1. Install (once)

1. Run **GAC-Card-Scanner-Setup.exe** (Windows) or open the **.dmg** (Mac).
2. Open **GAC Card Scanner**. **First-time setup** creates the first admin (on the scanner computer only).
3. **Admin → Reviewers**: add one account per person.

## 2. Every day

- Keep **GAC Card Scanner** open while people work.
- **AI check** (optional): **Admin → Settings → AI helper → Start**. Scanning works without it.
- **Scan with phone**: **Scan cards → More**. Same office Wi-Fi.

▼ More: backups

- Automatic every night at 02:30. The last 7 are kept in `backups/`.
- Another disk: start with `GAC_BACKUP_DIR=<folder>`.

- Restore: stop the scanner, run `scripts/restore_backup.sh <file>`, type **YES**.

---

## 3. Who may do what

| Who | May export |
|---|---|
| Reviewer | Approved cards of **their own** batch |
| Admin | Any batch, or all batches |

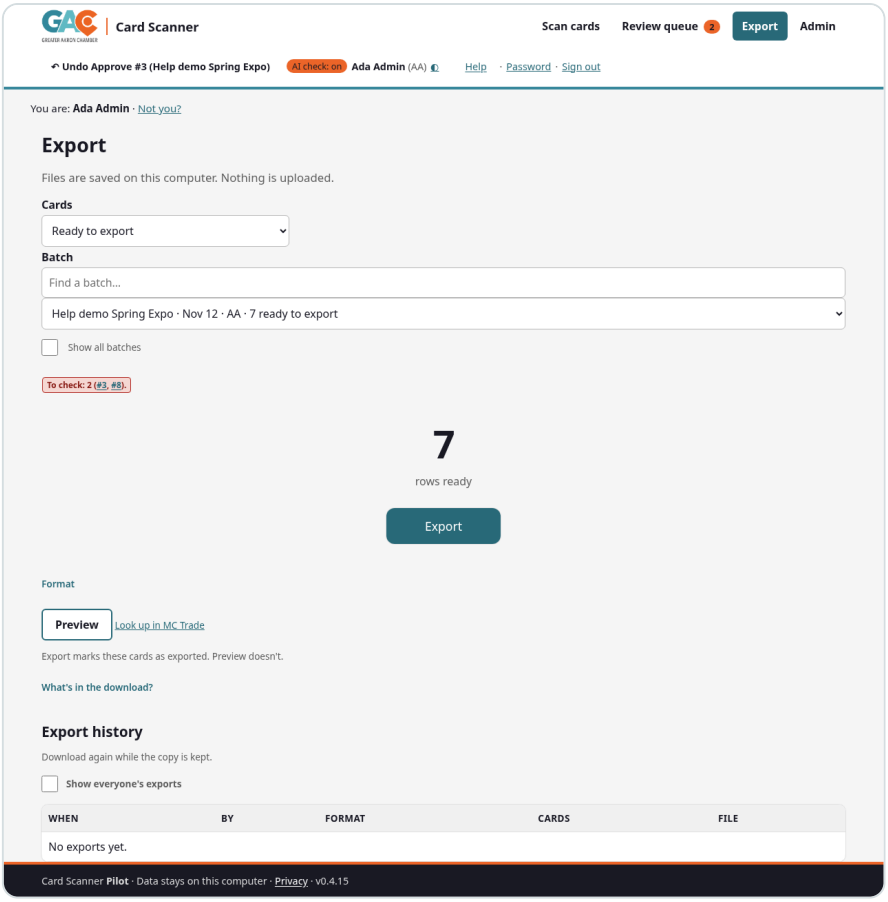

Only admins can **Confirm** a blocked field. Open the card, compare with the photo, press **Confirm** in the red box and give a reason.

**Needs admin:** reviewers flag blocked cards for you. Turn on **Needs admin** in the Review queue to list them.

---

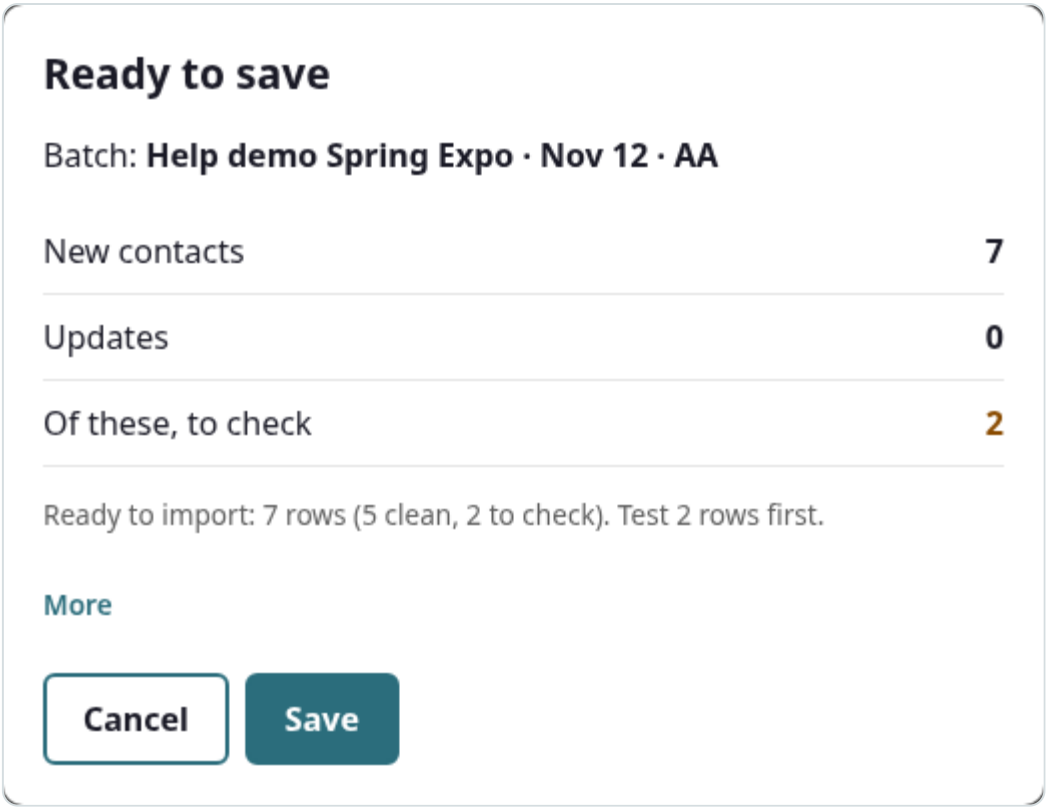

## 4. Export

1. **Export**. Pick the batch.
2. **Preview** shows the rows and what is left out.
3. **Export** → **Save**.

After saving, the **Next steps** box names the ONE file to import (**IMPORT-ME_…xlsx**, in your Downloads). Files named **NOT-FOR-IMPORT_…** are for reading.

The READ-ME starts with one line, e.g. **Ready to import: 3 rows (2 clean, 1 to check).** The same numbers show on the Export page, the batch list, the Save dialog, the summary and the dry run.

▼ More: why a card is left out

The Export page says why in one line. The **Left-out list** names each card.

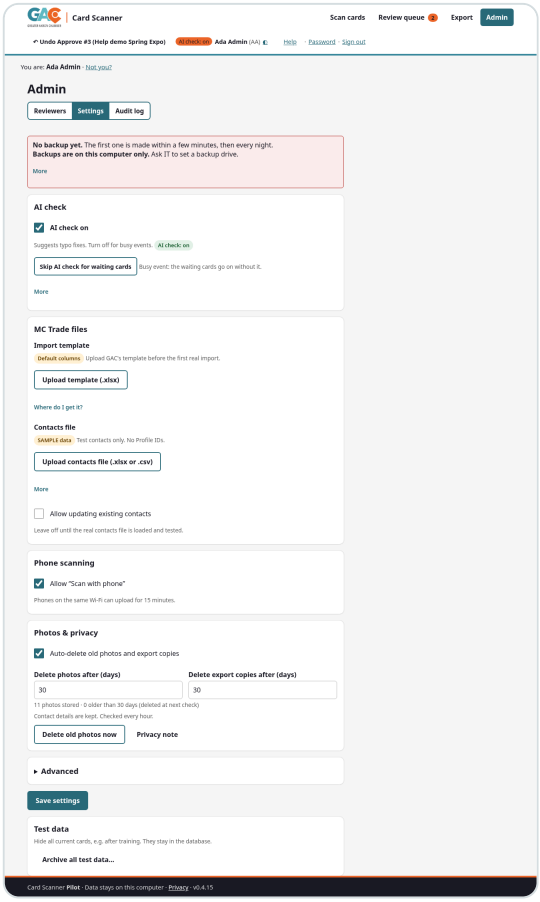

- **Already exported:** this person (same email, or same name and company) was in an earlier IMPORT-ME file. Leaving them out avoids a duplicate in MC Trade.
- **Edited after export, so it is not in this file unless an admin includes it.** Tick **Include anyway** in the Save dialog to send it again.
- **Waiting for admin:** a reviewer pressed **Needs admin**.
- A contacts list (CSV) is not an MC Trade import. It never marks a card as sent.
- **Nothing new to import:** no file is made.

## 5. MC Trade import: first time

1. MC Trade **Admin → Manage Codes**: create **CardScan-Pilot**.
2. MC Trade **Import Profiles → Download Template**. Upload it in **Admin → Settings → MC Trade template**.
3. MC Trade **Export All System Columns**. Upload it in **Admin → Settings → MC Trade contacts**.
4. **Export → Look up in MC Trade** (dry run). Fix every **FIX FIRST** row.
5. **Import 2 rows first.** An import can't be undone.
6. Import organizations, then individuals, then updates (separately).

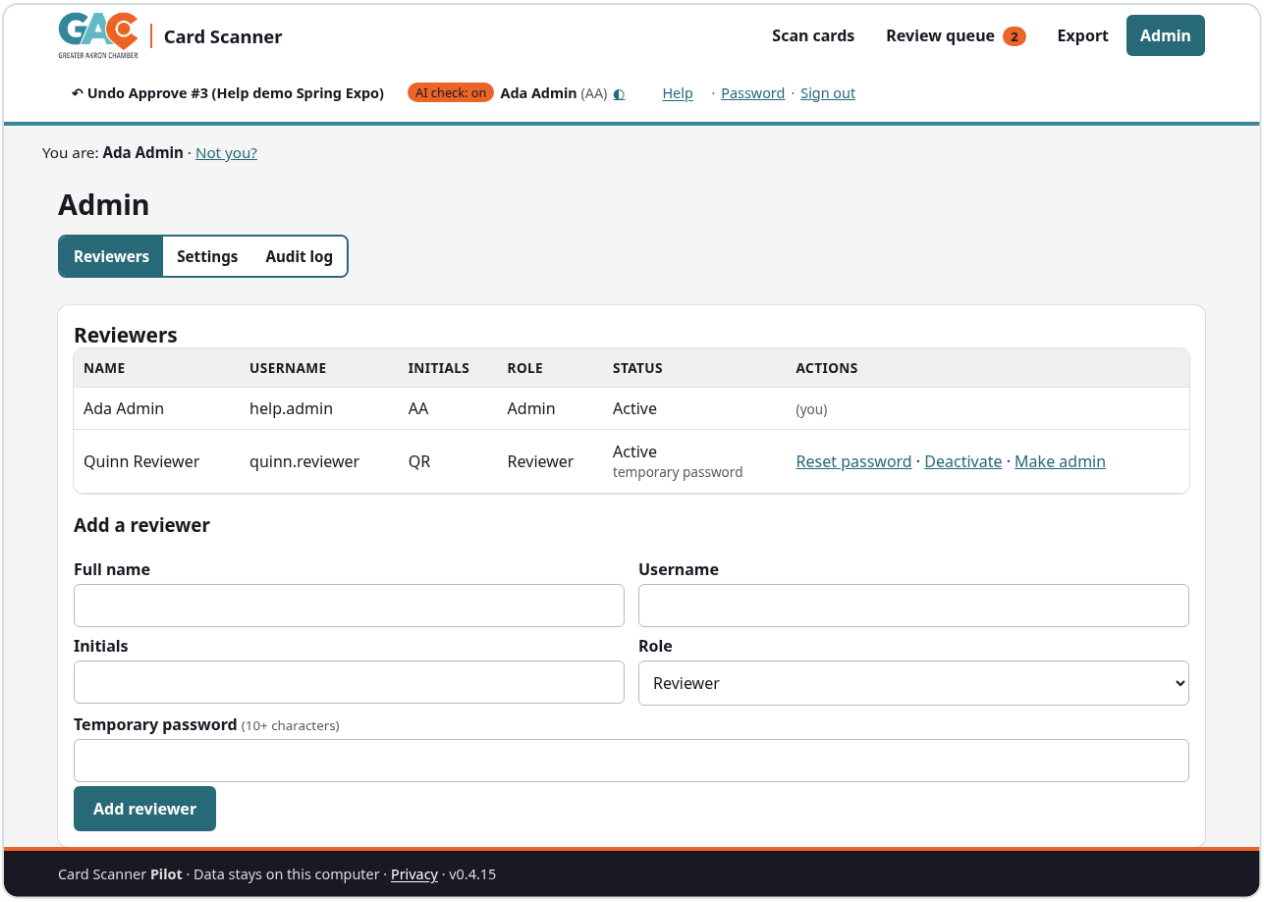

The scanner never sends anything to MC Trade.

## 6. Settings and accounts

### ▼ More: settings

| Setting | Default |
|---|---|
| AI double-check | On when the AI helper runs |
| MC Trade code (AffCode1) | `CardScan-Pilot` |
| Allow "update existing contact" | Off. Turn on after one tested update import. |
| Phone format | `330-555-0181` |
| Delete photos after | 30 days (never while pending) |
| Delete export copies after | 30 days |

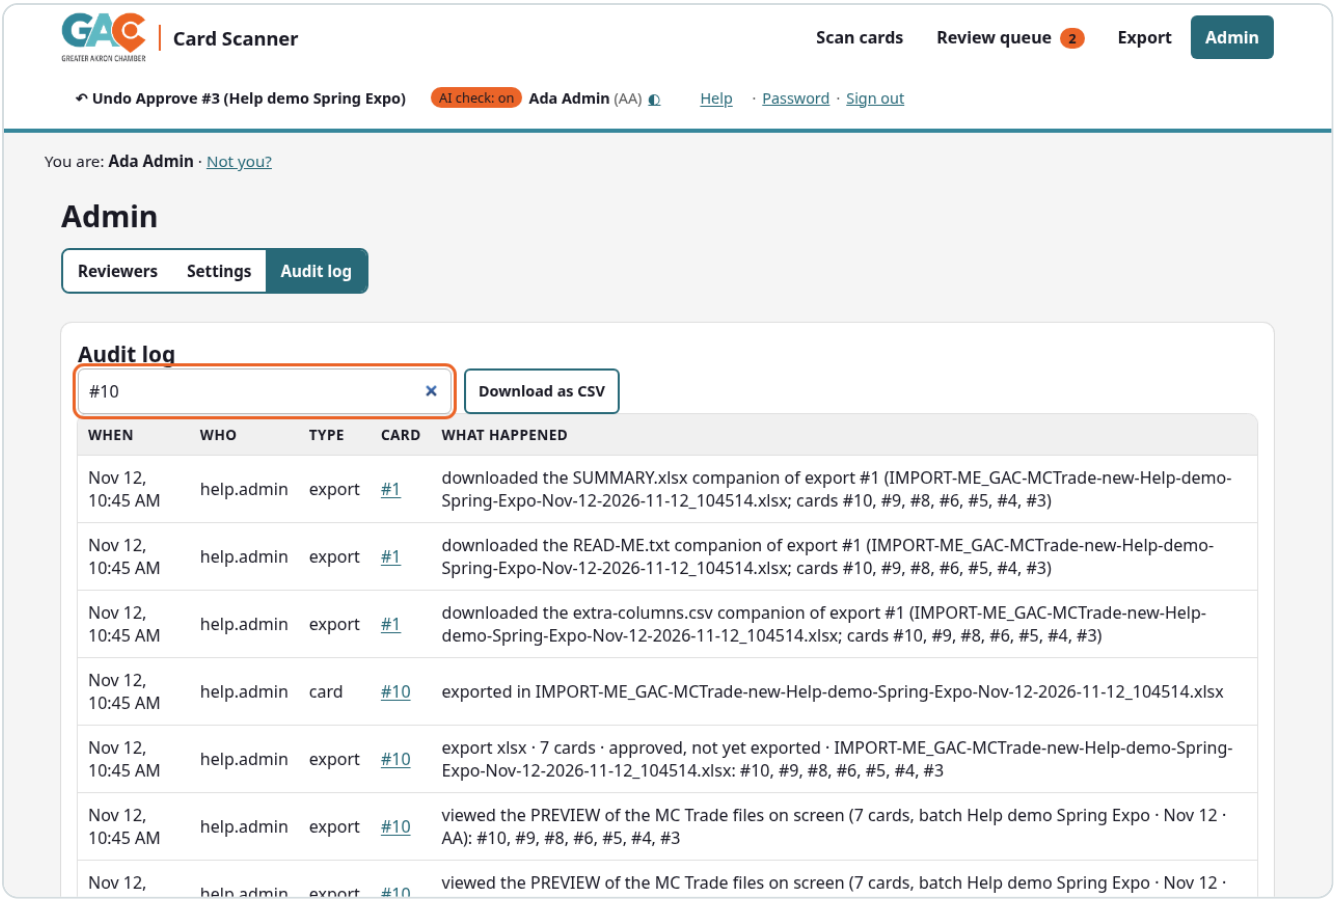

- **Reset password** also lifts a lock. **Deactivate** someone who left.
- Locked out of every admin account: `python -m app.admin reset-password <username>`.

---

## 7. Archive, audit, removal

- **Archive batch** (Review queue) hides it. **Undo** brings it back.
- **Admin → Audit log**: who did what. **Download as CSV**.
- **Removal request:** find the card in **Review queue → All**, then **More → Delete… → Delete permanently**. This also removes them from the export copies kept in the app. Remove them from MC Trade and from any export files you downloaded.

## 8. Problems

GAC admin contact: _____ (name, phone or email)

| Problem | Do this |
|---|---|
| "AI check is off" | Scanning still works. **Settings → AI helper → Start**. |
| Export blocked | Open the listed cards and fix them. |
| "Something changed" on Save | Someone edited a card. Check, then save again. |
| Phone can't connect | Same Wi-Fi. Allow **Private networks** in the firewall. |
| Sign-in locked | **Admin → Reviewers → Reset password**. |
